CLAIMS

I Claim:

1. An Internet based dispatching system comprising:
 - at least one database;
 - a security logon;
 - at least one filtering system for data in said database; and
 - web browser device access.
2. The system of claim 1, further comprising at least one inherent training system for users of said database.
3. The system of claim 2, wherein said at least one inherent training system is on-line through a web browser device.
4. The system of claim 1, wherein said system of security logon provides access levels to information.
5. The dispatching system of claim 1, wherein said database is employed to place at least one substitute teacher in at least one absent teacher position.

6. The dispatching system of claim 1, wherein said database is employed to place at least one temporary employee in at least one temporary position.

7. The dispatching system of claim 5, wherein said at least one substitute teacher is notified automatically, by said database, of an available job meeting qualifications of said at least one substitute teacher.

8. The dispatching system of claim 7, wherein said automatic notification is via a web browser device.

9. The dispatching system of claim 7, wherein said at least one substitute teacher is specifically requested and e-paged or emailed.

10. The dispatching system of claim 7, wherein said database holds said available job for said at least one substitute teacher for a period of time, and releases said available job to other substitute teachers if no reply from said at least one substitute teacher is received by said database.

11. The dispatching system of claim 1, wherein said at least one filtering system uses fields of data to determine user notification priority.

12. A method of activating an Internet database system, comprising:

managing software-based services and solutions to users across a wide area network from a central data center;

eliminating capitalization costs for users by employing a small user fee; and

dispatching said software-based services and solutions in real time.

13. The method of claim 12, wherein said software-based services and solutions are lesson plans and job assignments.

14. The method of claim 13, wherein said software-based services and solutions are dispatched automatically to authorized users, eligible to accept said software-based services and solutions.

15. The method of claim 12, wherein said dispatching occurs according to data entered into a rapid entry system.
